

Job Description

We are looking for junior or mid-level experienced software developers that meet our skills and expertise expectations for full-time employment positions. Our company is expanding our team as part of our commitment to expanding our product offering. Chosen candidates will become key players in the design and development of our core enterprise level software applications.

The Software Engineer position is part of our Engineering Team. THE APPLICANT MUST WORK WELL WITH OTHERS. The position reports directly to our Senior Engineer Project Manager. Our Engineering Team is responsible for development and maintenance of our proprietary software product. Software Engineers are responsible for:

- Collaborating on design and development of new software programs.
- Maintain and update existing software.
- Providing engineering support when necessary.
- Gathering requirements, completing project specs, and developing custom programs.

Applicants will be required to work in our Simi Valley, CA corporate office.

Compensation is dependent on experience. Submissions from applicants only; no agencies.

Required Skills and Experience:

- Full stack developer.
 - Database - Must know SQL (preferably using SQL Server, Oracle is a plus)
 - Language - C# ([ASP.NET](#) MVC, APIs, Windows Form)
 - Front End - HTML5, JQuery, Bootstrap and Ajax
- 2-3 years of C# programming experience in an agile development environment.
- Clear understanding of software development fundamentals.
- Excellent technical and non-technical written and verbal communication skills.
- Ability to work collaboratively with technical and non-technical teams.

Preferred Qualifications:

- Accounting, CRM, ERP, financial services, or related software development experience.
- Direct experience or education with:
 - Databases – SQL Server, Sybase and/or Oracle
 - Desktop and/or web application UI development
 - Crystal Report
 - JavaScript
 - Team Foundation Server (TFS) - Including administration.
